Pattern Recognition
Homework 5 announcement

TA: 楊証琨, Jimmy

Ph.D. student at National Taiwan Universitiy

d08922002@csie.ntu.edu.tw

Homework 5

- **Deadline: June 12 Sun. at 23:59**
  1. Code assignment (100%): Implement the deep neural network by any deep learning frameworks, e.g., Pytorch, TensorFlow and Keras, and then train DNN model on the Cifar-10 dataset
- Submit your **1) code** (.py/.ipynb) and **2) reports** (.pdf) on E3
  - Sample Code
  - HW5 questions
- Please follow the **file naming rules <STUDENT ID>_HW5.pdf,** otherwise, you will get penalty of your scores

Reports

- Include the implementation details, model architecture, hyperparameters, and used deep learning framework
  - https://github.com/paperswithcode/releasing-research-code
- Include the accuracy of your model in the reports!

DO NOT MODIFY CODE BELOW! ¶

Please screen shot your results and post it on your report

```
In [ ]: y_pred = your_model.predict(x_test)

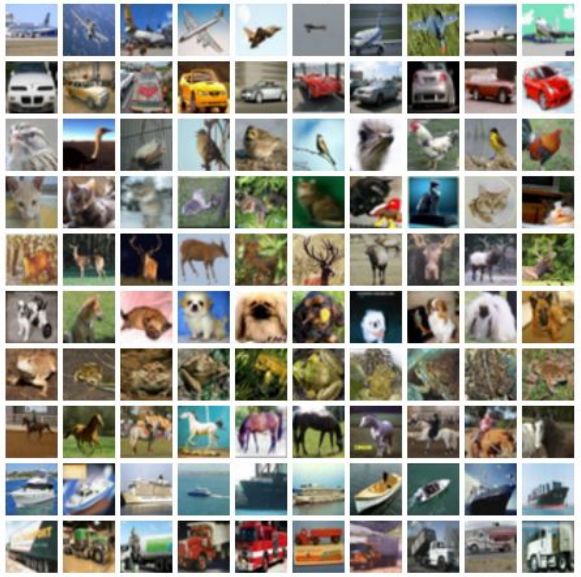
In [14]: assert y_pred.shape == (10000,)

In [15]: y_test = np.load("y_test.npy")
         print("Accuracy of my model on test set: ", accuracy_score(y_test, y_pred))

         Accuracy of my model on test-set:  0.6769
```

Cifar-10 dataset

- 60,000 (50,000 training + 10,000 testing) samples, 32x32 RGB images in 10 classes
  - airplane, automobile, ship, truck, bird, cat, deer, dog, frog, horse



Leaderboard of CIFAR-10

- **Baseline: accuracy over 70%**
- Note that you should only train and evaluate your model on the provided dataset HERE
- **DO NOT** download the data from other resources.

CIFAR-10

who is the best in CIFAR-10 ?

CIFAR-10 49 results collected

Units: accuracy %

Classify 32x32 colour images.

Result	Method	Venue	Details
96.53%	Fractional Max-Pooling	arXiv 2015	Details
95.59%	Striving for Simplicity: The All Convolutional Net	ICLR 2015	Details
94.16%	All you need is a good init	ICLR 2016	Details
94%	Lessons learned from manually classifying CIFAR-10	unpublished 2011	Details
93.95%	Generalizing Pooling Functions in Convolutional Neural Networks: Mixed, Gated, and Tree	AISTATS 2016	Details
93.72%	Spatially-sparse convolutional neural networks	arXiv 2014	
93.63%	Scalable Bayesian Optimization Using Deep Neural Networks	ICML 2015	
93.57%	Deep Residual Learning for Image Recognition	arXiv 2015	Details
93.45%	Fast and Accurate Deep Network Learning by Exponential Linear Units	arXiv 2015	Details
93.34%	Universum Prescription: Regularization using Unlabeled Data	arXiv 2015	
93.25%	Batch-normalized Maxout Network in Network	arXiv 2015	Details
93.13%	Competitive Multi-scale Convolution	arXiv 2015	
92.91%	Recurrent Convolutional Neural Network for Object Recognition	CVPR 2015	Details
92.49%	Learning Activation Functions to Improve Deep Neural Networks	ICLR 2015	Details
92.45%	cifar.torch	unpublished 2015	Details

Deep learning framework

- If you are a newbie in a deep learning framework, we recommend you learn Keras or Pytorch.
  - Keras: Only Few lines of code to build a CNN model
  - TensorFlow: Easy for depolyment
  - Pytorch: Flexible for research

	Keras	TensorFlow	PyTorch
Level of API	high-level API[1]	Both high & low level APIs	Lower-level API[2]
Speed	Slow	High	High
Architecture	Simple, more readable and concise	Not very easy to use	Complex[3]
Debugging	No need to debug	Difficult to debugging	Good debugging capabilities
Dataset Compatibility	Slow & Small	Fast speed & large	Fast speed & large datasets
Popularity Rank	1	2	3
Uniqueness	Multiple back-end support	Object Detection Functionality	Flexibility & Short Training Duration
Created By	Not a library on its own	Created by Google	Created by Facebook[4]
Ease of use	User-friendly	Incomprehensive API	Integrated with Python language
Computational graphs used	Static graphs	Static graphs	Dynamic computation graphs[5]

Keyword for boosting your performance

- Beat the baseline
  - CNN structure (number of filters, number of CNN layers,...)
  - Data augmentation
  - Regularization

- Score over 90%!
  - Read some papers from leaderboard of Cifar-10

Accelerate your training by GPU

- You may need GPU to accelerate the training of deep neural network. We provide several free GPU resources for you, some of resources need registration and limited by usage.
  - Google Colab: Free GPU usage for continuous 24 hours
  - Microsoft Azure: Registration for free GPU trials

Reference

- Convolutional Neural Networks Tutorial in PyTorch
- Building a Convolutional Neural Network (CNN) in Keras

Late Policy

- No late policy on homework 5!

Notice

- Submit your homework on E3-system !
- Check your email regularly, we will mail you if there are any updates or problems of the homework
- If you have any questions or comments for the homework, please mail TAs and cc Prof. Lin
  - Prof. Lin, lin@cs.nctu.edu.tw
  - TA Jimmy, d08922002@csie.ntu.edu.tw
  - TA 晨軒, derekt.cs06@nctu.edu.tw
  - TA 政儒, ace52751208@gmail.com

Have fun!
